Project Description

PLAN-Z is an online event management and ticketing platform designed to simplify the process of discovering, organizing, and managing events. Users can browse events, purchase tickets, and manage their bookings, while organizers can create and manage events through a dedicated dashboard. The platform provides administrators with tools to monitor activities and ensure smooth operation of the system.

Project Rationale

Background

Many event organizers currently rely on multiple tools to manage registrations, promotions, and attendee communication. This project aims to provide a centralized platform that simplifies event organization and participation. PLAN-Z enables users to discover events easily while providing organizers with efficient tools to manage participants and ticket sales.

Scope

The platform targets students, professionals, and event organizers who want to host or attend events. Users can browse events, book tickets, and track their participation. Organizers can manage event information and participants, while administrators ensure platform reliability and security.

Project Objectives

- Provide a centralized platform for event discovery and management.
- Allow users to easily browse and book event tickets.
- Provide event organizers with tools to create and manage events.
- Ensure secure ticket purchasing and user authentication.
- Enable administrators to monitor and manage platform activities.

Project Approach

Technology Stack: MERN Stack

Frontend: React.js

Backend: Node.js with Express.js

Database: MongoDB

Requirements

Requirement No.	Requirement
1	As an attendee I want to browse and search for events.
	Feature 1: The system will allow attendees to browse events by category, location, and date.
	Feature 2: The system will provide search and filter functionality for events.
	Feature 3: The system will display detailed event information pages.
	Feature 4: The system will allow attendees to save events to a favorites list.
2	As an attendee I want to book tickets for events
	Feature 1: The system will allow attendees to select ticket types and quantities.
	Feature 2: The system will provide secure online payment functionality.
	Feature 3: The system will generate digital ticket confirmations.
	Feature 4: The system will allow attendees to view booking history.

3.	As an organizer I want to create and manage events
	Feature 1: The system will allow organizers to create events with detailed information.
	Feature 2: The system will provide an event management dashboard for organizers.
	Feature 3: The system will allow organizers to update or cancel events
	Feature 4: The system will allow organizers to view attendee lists and

	ticket sales.
4.	As an admin I want to manage the platform.
	Feature 1: The system will allow admins to approve or remove events.
	Feature 2: The system will provide an admin dashboard for managing users.
	Feature 3: The system will allow admins to monitor ticket sales and system activity.
	Feature 4: The system will allow admins to handle user complaints.

5.	As an attendee I want to purchase event merchandise.
	Feature 1: The system will allow the organizer to upload and manage merchandise items related to their events.
	Feature 2: The system will provide a merchandise section where attendees can browse available products such as shirts, posters, or accessories.
	Feature 3: The system will allow the attendee to add merchandise items to a cart and purchase them through the platform.
	Feature 4: The system will allow the attendee to view their merchandise order history and track purchased items.ticket sales.

Conclusion

PLAN-Z aims to create a centralized digital platform for event discovery and management. By supporting attendees, organizers, and administrators through dedicated features and dashboards, the platform will improve the efficiency of event coordination and participation.
